WORK EXPERIENCE

Inventory Management System – Kabalikat Para sa Maunlad na Buhay Inc. (KMBI) December 2025 – March 2026
Software Engineer Intern

- Built a role-based access system for **100+** users across multiple branches using **JWT authentication**, giving different permission levels to managers, staff, and admins, the system is live and used daily.
- Developed the login system, **dashboard analytics**, export sheets, and activity history logs for the platform, which helped cut report generation time by **30%**.
- Handled **REST API** development, wrote API documentation, and tested all endpoints using **Postman** to make sure they worked correctly and were easy for the team to maintain.
- Deployed and configured the application on **Microsoft Azure** for reliable cloud hosting, and collaborated in an Agile team using Angular, ASP.NET, TypeScript, Tailwind CSS, MSSQL, and Git.

PROJECTS

Jaya: Just Ask Your AI | Freelance February 2026
Full-stack Developer

- Built a full-stack **AI-powered** web app currently used by real teachers and students, integrating multiple **LLMs (GROQ, Gemini)** through structured prompt engineering to generate accurate and context-aware quiz content.
- Designed and iterated on prompts to reliably guide **LLM behavior** based on user-selected fields, ensuring consistent and relevant AI-generated output
- Added an exam mode where users can go through the generated questions and review each answer, helping students' study and check their understanding after each session.
- Tech stack: Angular, Express.js, TypeScript, Firebase, GROQ API, Gemini API.

Outspace: Digital E-Commerce | Freelance December 2025
Full-stack Developer

- Set up secure login using **Google OAuth 2.0**, making sure only the right users could access the admin dashboard and that all transactions were protected.
- Built a real-time admin dashboard analytics that tracks **100+ orders**, shows live sales data, and combines revenue from all sources so the client can monitor the store briefly.
- Improved loading speed for **200+** digital assets by using **async/await** and **LINQ** to fetch data more efficiently, making the app noticeably faster.
- Tech stack: ASP.NET Web API, Angular, Entity Framework Core, MSSQL Server, Firebase, Google Authentication.

EDUCATION

Cagayan State University – Gonzaga Campus 2026
Bachelor of Science in Information Technology - Major in Web Development

- Competed in Web Development contest at campus level.
- Competed in IT Uniwide Static Web Design contest, recognized for web development skills.

SKILLS

Frontend: Angular, React, Tailwind CSS
Backend: ASP.NET Web API, Express.js, Laravel
Programming Languages: TypeScript, C#, PHP
Databases: MSSQL, MySQL, Firebase, Supabase
AI & LLM Tools: Codex, Claude Code, GitHub Copilot, Cursor, Gemini, GROQ, Microsoft Copilot Studio
Dev Tools: REST APIs, Git, Postman, Selenium, NUnit, Vercel
Others: Prompt Engineering, AI API Integration, Database Management, Test Automation
